

FireTower™

Your last line of defense against unknown computer threats

STAY PROTECTED FROM LIVE PC INTRUSION

AutoRun Entry Validation

FireTower will discover and authenticate all existing Autorun entries on your computer

Real-Time Alerts

FireTower will automatically detect and notify you of all incoming software attempting to insert Autorun entries on your computer in real-time

All Relevant Information Is One-Click Away

Discover, correlate, and analyze Autorun entries. All critical information is available either on-screen or one-click away from Faultwire.com®

Share Detailed Autorun Settings with a Support Professional

FireTower Snapshot Viewer simplifies the process of asking for help by allowing you to share a detailed snapshot of your Autorun settings with peers or professionals

- Analyze and authenticate your existing Autorun entries
- Real-time interception of software attempting to insert Autorun entries
- Troubleshoot alerts by sharing your Autorun entries with peer or professional help through FireTower Snapshot Viewer
- For Windows 7/Vista/XP x86/x64

There are numerous ways for malicious software to gain access to your computer, but to ensure that they remain there they often use a common trick: creating an Autorun entry on your computer. An Autorun entry allows software of all types, malicious or safe, to establish persistence on a computer by telling your computer to automatically execute their software every time your system boots up. Many types of malware take advantage of this functionality.

FireTower is a free, real-time discovery tool for detecting Autorun entry insertions. FireTower examines all currently installed Autorun entries and automatically detects and notifies you of all incoming Autorun entry insertion attempts.

The Autorun information that FireTower provides is extensive and can be difficult for a casual user to interpret. That is why we also include a feature called FireTower Snapshot Viewer. Snapshot Viewer allows you to upload a snapshot of your current Autorun entries to the internet and generates a link that you can share with either computer savvy friends or

professional technicians. Snapshot Viewer allows other people to view your Autorun entries as if they were sitting in front of your computer.

FireTower is designed to run alongside traditional Anti-Virus software. FireTower provides the features missing from traditional security solutions which fail to protect you from undiscovered malware. FireTower completes your computer security solution.

FireTower is provided free of charge for personal use. For information about commercial use or distribution please contact us at FireTower@Sampansecurity.com
