

FireTower Guard

Built-in FireTower Discovery Tool

FireTower Guard will discover all existing and incoming Autorun entries on your computer

Autorun Settings Repository (ASR) Service

All Autorun entries are automatically validated in real-time through ASR

FireTower Guard Service

FireTower Guard Service is an automated non-signature based (does not require constant updates) malware protection solution with customizable security levels for Zero-day attacks

Situational Awareness Management Option

FireTower Snapshot Viewer and optional CyCon Service allow your PC to be monitored or managed by peers or professionals

- Built-in FireTower Discovery Tool
- All Autorun entries are automatically validated through Autorun Settings Repository Service
- Automated FireTower Guard Service without the need for constant updates
- Situational Awareness Management Options for peer or professional assistance
- For **Windows 10/8/7/Vista/XP**

In order to keep up with the constantly growing phenomenon of computer security threats, computer users need an application that is smart enough to identify malware both new and old, that does not require constant updates and that can provide users with tools to seek help when they are unable to make an informed decision on their own.

FireTower Guard is the computer security solution that addresses these challenges. Rather than relying on signature-based detection, FireTower Guard identifies malicious software by monitoring the behavior of current and incoming applications on your computer. This allows FireTower Guard to detect and stop malware even if it has never been catalogued and identified as malicious before.

FireTower Guard offers adjustable levels of security to accommodate varying levels of security vulnerability (i.e. connected to intra-net vs. connected to internet). FireTower Guard Profile Settings are adjustable on the fly.

FireTower Guard and CyCon are trademarks of Sampan Security Inc.

FireTower Guard also provides users with the Snapshot Viewer tool and the optional CyCon Service to seek assistance. Optional CyCon Service allows users to form a small network of computers that are monitored in real-time by a central web console.

FireTower Guard offers the flexibility, ease of use, and robust protection to help users of all experience levels defend their computers from the increasing wave of computer threats and is designed to co-exist with traditional Anti-Virus software. FireTower Guard provides the features missing from traditional security solutions that fail to protect you from undiscovered malware. FireTower Guard completes your computer security solution.
